*Full-stack engineer (React, Node, Rails) with 7+ years of experience, currently shipping production LLM features — agent tooling, structured outputs, streaming AI UX — at Deel.*

## Experience

**Software Engineer**, Deel — Remote Jul 2025 – Present

**Deel AI — Akai (akai.run)**

- Core engineer on **Akai**, a platform for building and **deploying AI agents at scale**, used across Deel departments including client onboarding, legal, and HR.
- Implemented **structured output** pipelines to integrate Akai with Deel AI, enabling reliable, schema-validated LLM responses consumed by downstream product features.
- Led migration from the Anthropic SDK to the **Vercel AI SDK**, making the platform provider-agnostic and simplifying model experimentation and swaps.
- Built **streaming response UI** and **prompt-chaining workflow UI**, letting non-technical teams compose multi-step LLM pipelines visually.
- Developed **CLI tools invoked by LLMs via tool calling**, extending agent capabilities into internal systems.

**Software Engineer**, BigBinary — Remote Aug 2021 – Jul 2025

**Neeto Suite of Applications**

- Worked full-stack across the Neeto suite — **React** frontends with **Ruby on Rails** APIs — contributing backend endpoints, models, and migrations alongside frontend ownership.
- Created the **NeetoRecord Chrome Extension**, **featured in the Chrome Web Store**; implemented zoom-in animations and video trimming.
- Owned the **NeetoForm UI revamp**, architecting the form builder and managing a team of 2. Cut end-user bundle size by **80%** via tree shaking and SSR, eliminating client API calls on load.
- Created **NeetoWireframe**, a wireframing tool built from scratch that improved PRD quality across Neeto; migrated multiple products to **React Query**.
- Developed and maintained **NeetoUI**, the shared component library with Storybook docs; unit tests improved stability by **70%**. Maintained the open-source **NeetoCist** utility library, removing ~300 LOC per product repo.

**Cyber Security Analyst / Software Engineer**, TCS — Chennai, India Nov 2018 – Aug 2021

- Built a React + Recharts dashboard integrated with IBM QRadar SIEM, reducing non-reporting devices from **20% to 5%**.
- Automated malware-alert response with CrowdStrike network isolation, cutting initial response time from **5 minutes to under 30 seconds**.

## Skills

- **AI/LLM:** Vercel AI SDK, Anthropic SDK, tool calling / agents, structured outputs, prompt chaining, streaming UX
- **Languages:** TypeScript, JavaScript (ES6), Ruby, HTML, CSS
- **Frameworks:** ReactJS, NextJS, Ruby on Rails, NodeJS, ExpressJS, PostgreSQL, Redis, AWS Lambda
- **Tooling:** React Query, Redux, Zustand, TailwindCSS, Webpack, Rollup, Jest, React Testing Library, Storybook, GitHub Actions, CircleCI

## Education

**University College of Engineering, Thiruvananthapuram** Jun 2014 – Jun 2018

Bachelor of Technology in Computer Science and Engineering
